Chapter 11

Namespace Index

11.1 Namespace List

Here is a list of all namespaces with brief descriptions:

Ui	13
--------------	----

Chapter 12

Hierarchical Index

12.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Document	14
Homework	18
Pattern	20
PatternTree	23
Project	26
qt_meta_stringdata_Widget.t	27
QWidget	
Widget	30
Ui_Widget	27
Ui::Widget	29

Chapter 13

Class Index

13.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Document	14
Homework	18
Pattern	
Storing patterns from a document	20
PatternTree	23
Project	26
qt_meta_stringdata_Widget_t	27
Ui_Widget	27
Ui::Widget	29
Widget	30

Chapter 14

Namespace Documentation

14.1 Ui Namespace Reference

Classes

- class Widget

Chapter 15

Class Documentation

15.1 Document Class Reference

Public Member Functions

- `Document (std::string address)`
- `void RabinKarp ()`
Perform Rabin-Karp algorithm for this document.
- `void KMP ()`
Perdorm KMP algorithm for this document.
- `std::string getAddress ()`

Protected Member Functions

- `void makePattern ()`
Make the patterns with winnowing algorithm.
- `void preprocess ()`
- `bool isValid (char c)`

Private Member Functions

- `Document & operator= (const Document &other)`

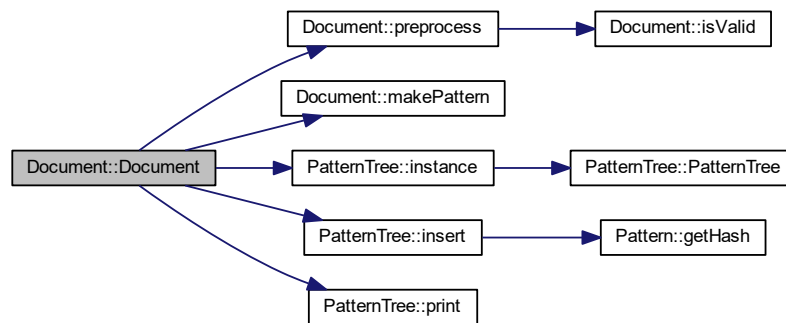

Private Attributes

- `std::string m_address`
- `std::string m_content`
- `std::vector< Pattern > m_patterns`

15.1.1 Constructor & Destructor Documentation

Document::Document (`std::string address`)

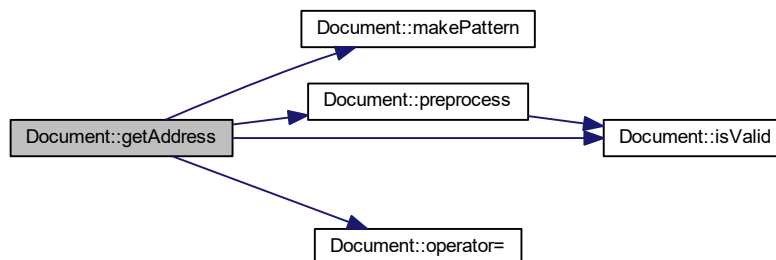

Here is the call graph for this function:

15.1.2 Member Function Documentation

std::string Document::getAddress () [inline]

Here is the call graph for this function:

bool Document::isValid (char c) [protected]

Here is the caller graph for this function:

void Document::KMP ()

Perform KMP algorithm for this document.

Here is the call graph for this function:

void Document::makePattern () [protected]

Make the patterns with winnowing algorithm.

Here is the caller graph for this function:

Document& Document::operator= (const Document & *other*) [private]

Here is the caller graph for this function:

void Document::preprocess () [protected]

Remove spaces and tabs and etc; Need to replace comments Need to add replacement

Here is the call graph for this function:

Here is the caller graph for this function:

void Document::RabinKarp ()

Perform Rabin-Karp algorithm for this document.

Here is the call graph for this function:

15.1.3 Member Data Documentation

`std::string Document::m_address` [private]

`std::string Document::m_content` [private]

`std::vector<Pattern> Document::m_patterns` [private]

15.2 Homework Class Reference

Public Types

- `enum HomeworkType { Single, Multiple }`

Public Member Functions

- `Homework (std::string path, HomeworkType type)`
Initialization and build the whole file system.

Protected Member Functions

- `bool findSingle (std::string filePath)`
- `bool findMultiple (std::string filePath)`
- `void dfsFolder (std::string folderPath, std::vector< std::string > &address)`

Private Attributes

- `HomeworkType m_type`
- `std::string m_path`
- `std::vector< Project > m_projects`

15.2.1 Member Enumeration Documentation

`enum Homework::HomeworkType`

Enumerator

Single

Multiple

15.2.2 Constructor & Destructor Documentation

`Homework::Homework (std::string path, HomeworkType type)`

Initialization and build the whole file system.

Here is the call graph for this function:

15.2.3 Member Function Documentation

```
void Homework::dfsFolder ( std::string folderPath, std::vector< std::string > &
address ) [protected]
```

Here is the caller graph for this function:

```
bool Homework::findMultiple ( std::string filePath ) [protected]
```

Here is the call graph for this function:

Here is the caller graph for this function:

```
bool Homework::findSingle ( std::string filePath ) [protected]
```

Here is the caller graph for this function:

15.2.4 Member Data Documentation

```
std::string Homework::m_path [private]
```

```
std::vector<Project> Homework::m_projects [private]
```

```
HomeworkType Homework::m_type [private]
```

15.3 Pattern Class Reference

Storing patterns from a document.

Collaboration diagram for Pattern:

Public Member Functions

- `Pattern (Document &parDocument, std::string pattern, int pos)`

The only constructor.

- `bool operator< (const Pattern &right)`

operator < for inserting into PatternTree

- `long long int getHash () const`
- `int getLength () const`
- `Document * getParDocument ()`
- `std::string getPattern () const`
- `void print () const`

print basic information about the pattern

Protected Member Functions

- `void calcHash ()`

Private Member Functions

- `Pattern & operator= (const Pattern &other)`

Private Attributes

- `std::string m_pattern`
- `int m_pos`
- `long long int m_hash`
- `Document * m_parDocument`

15.3.1 Detailed Description

Storing patterns from a document.

15.3.2 Constructor & Destructor Documentation

`Pattern::Pattern (Document & parDocument, std::string pattern, int pos)`

The only constructor.

Here is the call graph for this function:

15.3.3 Member Function Documentation

`void Pattern::calcHash ()` [protected]

Here is the caller graph for this function:

```
long long int Pattern::getHash (    ) const [inline]
```

Returns

The hash value.

Here is the caller graph for this function:

```
int Pattern::getLength (    ) const [inline]
```

Returns

the length of the pattern.

```
Document* Pattern::getParDocument (    ) [inline]
```

Returns

the address of the parent document. Note: need to use const here

```
std::string Pattern::getPattern (    ) const [inline]
```

Here is the call graph for this function:

```
bool Pattern::operator< ( const Pattern & right ) [inline]
```

operator < for inserting into `PatternTree`

Pattern& Pattern::operator= (const Pattern & *other*) [private]

Here is the caller graph for this function:

void Pattern::print () const

print basic information about the pattern

Here is the caller graph for this function:

15.3.4 Member Data Documentation

long long int Pattern::m_hash [private]

Document* Pattern::m_parDocument [private]

std::string Pattern::m_pattern [private]

int Pattern::m_pos [private]

15.4 PatternTree Class Reference

Collaboration diagram for PatternTree:

Public Member Functions

- `PatternTree ()`
- `void destroy ()`
- `void insert (const Pattern &pattern)`
insert a pattern into the tree
- `std::vector< Pattern > find (const long long int hash)`
- `std::vector< Pattern > getAll ()`
- `void print ()`
print some basic information about the tree

Static Public Member Functions

- `static PatternTree * instance ()`

Private Member Functions

- `PatternTree (const PatternTree &other)`
- `PatternTree & operator= (const PatternTree &right)`

Private Attributes

- `patternMmap m_tree`

Static Private Attributes

- `static PatternTree * m_instance = NULL`

15.4.1 Detailed Description

A tree with all patterns stored in it Singleton

15.4.2 Constructor & Destructor Documentation

`PatternTree::PatternTree ()`

Here is the caller graph for this function:

```
PatternTree::PatternTree ( const PatternTree & other ) [private]
```

15.4.3 Member Function Documentation

```
void PatternTree::destroy ( )
```

```
std::vector< Pattern > PatternTree::find ( const long long int hash )
```

find a set of patterns with the same hash value in the tree Note: I cannot make it const...

```
std::vector< Pattern > PatternTree::getAll ( )
```

```
void PatternTree::insert ( const Pattern & pattern )
```

insert a pattern into the tree

Here is the call graph for this function:

Here is the caller graph for this function:

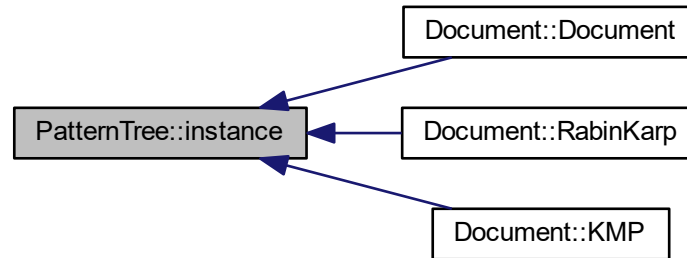

```
PatternTree * PatternTree::instance ( ) [static]
```

Here is the call graph for this function:

Here is the caller graph for this function:

```
PatternTree& PatternTree::operator= ( const PatternTree & right ) [private]
```

```
void PatternTree::print ( )
```

print some basic information about the tree

Here is the caller graph for this function:

15.4.4 Member Data Documentation

```
PatternTree * PatternTree::m_instance = NULL [static], [private]
```

```
patternMmap PatternTree::m_tree [private]
```

15.5 Project Class Reference

Public Member Functions

- `Project (std::string path, const std::vector< std::string > &address)`

Note: need to think about reference here.

Private Attributes

- `std::string m_path`
- `std::vector< Document > m_documents`

15.5.1 Constructor & Destructor Documentation

```
Project::Project ( std::string path, const std::vector< std::string > & address )
```

Note: need to think about reference here.

15.5.2 Member Data Documentation

```
std::vector<Document> Project::m_documents [private]
```

```
std::string Project::m_path [private]
```

15.6 qt_meta_stringdata_Widget_t Struct Reference

Public Attributes

- QByteArrayData *data* [3]
- char *stringdata0* [14]

15.6.1 Member Data Documentation

```
QByteArrayData qt_meta_stringdata_Widget_t::data[3]
```

```
char qt_meta_stringdata_Widget_t::stringdata0[14]
```

15.7 Ui_Widget Class Reference

Inheritance diagram for Ui_Widget:

Public Member Functions

- void *setupUi* (QWidget **Widget*)
- void *retranslateUi* (QWidget **Widget*)

Public Attributes

- QLabel * *label*
- QLabel * *label_2*
- QLabel * *label_3*
- QPushButton * *pushButton*
- QLabel * *label_4*

15.7.1 Member Function Documentation

```
void Ui_Widget::retranslateUi ( QWidget * Widget ) [inline]
```

Here is the caller graph for this function:

```
void Ui_Widget::setupUi ( QWidget * Widget ) [inline]
```

Here is the call graph for this function:

Here is the caller graph for this function:

15.7.2 Member Data Documentation

QLabel* Ui_Widget::label

QLabel* Ui_Widget::label_2

QLabel* Ui_Widget::label_3

QLabel* Ui_Widget::label_4

QPushButton* Ui_Widget::pushButton

15.8 Ui::Widget Class Reference

Inheritance diagram for Ui::Widget:

Collaboration diagram for Ui::Widget:

Additional Inherited Members

15.9 Widget Class Reference

Inheritance diagram for Widget:

Collaboration diagram for Widget:

Public Slots

- void Print ()

Public Member Functions

- Widget (QWidget *parent=0)
- ~Widget ()

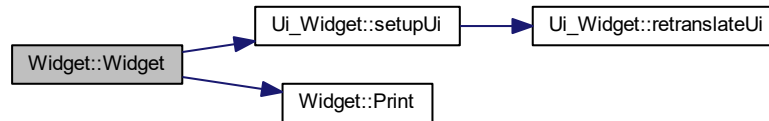

Private Attributes

- `Ui::Widget * ui`

15.9.1 Constructor & Destructor Documentation

`Widget::Widget (QWidget * parent = 0)` [explicit]

Here is the call graph for this function:

`Widget::~~Widget ()`

15.9.2 Member Function Documentation

`void Widget::Print ()` [slot]

Here is the caller graph for this function:

15.9.3 Member Data Documentation

`Ui::Widget* Widget::ui` [private]
